

# The Unfindable Readymade

*The following is part of a lecture, directly written in English, that was first given at the Conference of The College Art Association, Boston, MA, February 21-24, 1996. The lecture was presented in a session directed by Francis M. Naumann called "Marcel Duchamp and the Ready-made: From Origin to Consequence." The author is begging indulgence to the reader for his fancy English.*

1938, p. 23

## *chapter 1. The traditional definition of a readymade*

The only definition of "readymade" published under the name of Marcel Duchamp ("MD" to be precise) stays in Breton and Eluard's *Dictionnaire abrégé du Surréalisme*: "an ordinary object elevated to the dignity of a work of art by the mere choice of an artist." (Figure 1)

If you accept a readymade as an artwork, it means that you assume that the diverse traditional qualities of an artwork – such as contemplation, composition, manner, skill, style, expression, taste, beauty, etc. – suddenly become not relevant

anymore.

In other words, since readymade is art, the concept of art is completely revolutionized. That revolution has an author: Marcel Duchamp. And his historical and revolutionary readymades are all dated between 1913 and 1919.

Such are in a few words the elements you can find in any recent history of art. It is on the base of this definition of readymades, that philosophers such as Dickie, Danto, de Duve, Genette and many others, have built a paragraph, a few pages, a chapter or the whole of their own esthetics theory. Let's now go back to the Duchampian artworks themselves.

## chapter 2. The "not-assisted" readymades

It is obvious that only a few readymades of Marcel Duchamp are concerned with this general and basic definition: those which are not physically "assisted" or "corrected" or "aided" or "imitated."

For example *Why not sneeze Rrose Sélavy?*, which is a real construction, like a Dali's "objet à fonctionnement symbolique," is not a readymade. If a so-called readymade consists in the putting together of several objects, even very few, this assemblage would require after all solving a problem of composition, and thus, it is no longer a readymade. At least, it is no longer a readymade which revolutionizes the concept of art. Therefore, these readymades are to be rejected from our interest:

- *readymade aidé (à bruit secret)* [With Hidden Noise], Pâques 1916, New York
- *Why not sneeze Rrose Sélavy?*, before June 1921, New York
- *Belle Haleine Eau de Voilette*, April 1921, New York
- *Sculpture de voyage*, 1918, Buenos Aires/lost

For the same reasons, all the readymades which have been corrected with pencil or with paint have to be rejected:

- *Pharmacie*, January 1914, Rouen
- *Nu descendant un escalier n°3*, 1916, New York
- *Apolinère Enameled*, 1916-17, New York
- *L.H.O.O.Q.*, October 1919, Paris

For the same reasons, the constructions which consist in reduced models of ordinary objects, such as windows, are also to be rejected:

- *Fresh Widow*, copyright Rose Sélavy, Winter 1920, New York
- *La bagarre d'Austerlitz*, [par] Rose Sélavy, November 1921, Paris
- Also, if the work consists in the transformation of a chosen object, it is not a readymade:
- *Ready-made malheureux*, a geometry book, April 1919, Buenos Aires/Paris/destroyed

Even the famous *air de Paris* which cannot be reduced to the choice of a certain quantity of air, has to be rejected:

- *50cc air de Paris*, a volume of air sealed inside a bulb and sent to America, December 1919, Paris/broken and repaired

The only readymades we are interested in for this paper – not that the other readymades are not interesting (they are maybe more interesting artistically speaking, but not philosophically) – are pure objects resulting of a single choice. Traditionally, these “mere” readymades are:

- a bicycle wheel: [Roue de bicyclette], 1913, Neuilly
- a bottle rack: [Porte-bouteilles], May or June 1914, Paris
- a shovel: *In advance of a broken arm*, November 1915, New York
- a chimney cowl: *Pulled at four Pins*, 1915, New York
- a comb: [peigne], 17 February 1916, 11 A. M, New York

- a restaurant fresco: [Fresque Murale], 1916, New York
- a typewriter cover: [...Pliant...de Voyage], 1916, New York
- a hat-rack: *Readymade* [Porte-chapeau], 1917, New York
- a coat-rack: *Trap* [Trébuchet], 1917, New York
- a urinal: *Fountain by Richard Mutt*, April 1917, New York

Of course, we could still discuss the fact that these final readymades are not assisted in any way. The bike is *vissé* [screwed down] on a stool. All of these readymades (except the restaurant fresco and the hat-rack) have very inventive (poetical or humorous) titles, all probably inscribed on the object. And some of them demand a very specific installation in the space: the hat-rack and the shovel hang from the ceiling, the coat rack is *vissé* on the floor, the urinal is reversed at 90°. (All these accessory details deserve a specific study, because much information is still missing.)

But for the moment, I suggest to forget these details and to consider these ten readymades in spite of their literary titles and inscriptions, their installation in a space and the artistic context in which they could be shown.

Under these conditions, it must be clear that there is, *a priori*, no physical difference between these readymades and the correspondent objects you could find in a shop. In other words, the difference does not appear if you consider the work physically (there is no work on a readymade), but only if you consider the artist's mind. Let us try to penetrate Duchamp's mind.

### *intermediary question*

The first statements from the mouth of Marcel Duchamp concerning readymades are a bit late: in 1945 to Janis, and in 1955 to Sweeney.

Indeed, you have only two ways of trying to penetrate the mind of Marcel Duchamp between 1913 and 1917, the time of these "not-assisted" readymades:

- You can study the story of the objects themselves. You can study the Notes, written at the same period.

Let us begin with the story of the objects.

### *chapter 3. The story of the objects*

If you carefully inspect the last and best chronology, established by J. Gough Cooper and J. Caumont (or Claude Rameil?), you notice that none of these ten readymades were exhibited for a long time (nearly twenty years), except for twice and under very peculiar conditions.

The first time, it was in the Bourgeois Gallery, New York (*Modern Art after Cézanne*, 3 – 29 April 1916) under a reference in the catalogue (“No. 50, 2 Ready Made’s”). We have no certainty about which were these “2 Ready Made’s,” but we know that they were placed in some kind of antechamber, perhaps in an umbrella stand, but not displayed in the real showroom of the gallery with a real label telling their title and author, as was done with the other works.

The second time is the famous *Fountain* story, at The Society of Independent Artists, New York, 9 April – 6 May 1917. I won’t argue about the fact that the piece was indeed not exhibited, as the rejection was not the will of the artist. The readymade object was actually proposed as an artwork, but not under the name of Marcel Duchamp, not even under the name of Rose Sélavy: it was under the name of a non-existent guy called Richard Mutt. In fact, I am not arguing that Duchamp is not behind Mutt. But if a readymade is the conjunction, a “rendez-vous,” between Marcel Duchamp and a chosen object, or more generally between the clear identity of an artist and the “mere choice of an object,” I just want to point out that in the Bourgeois Gallery, the chosen objects were more or less hidden and that in the Independents’ show the identity of the artist (whose name “Mutt” is very near “Mott,” a trademark of urinals), was at least doubtful. So in both cases the “rendez-

vous" was not clear.

Then you have to wait till 1936 before the bottle rack is exhibited, in a Breton Parisian show at the Galerie Charles Ratton (22 – 31 May 1936), named *Exposition Surréaliste d'objets mathématiques, naturels, trouvés et interprétés* where the bottle rack was lying near some strange objects, which are also not regularly called art, such as: eggs, "crystals containing millenary water," carnivore plants and scientific objects. But from that date, and especially from 1945, when *historical* retrospective exhibitions on Dada began to appear, replicas of Duchamp's readymades never stopped to be shown in numerous regular exhibitions at galleries and museums.

Going back to the pioneer era of Marcel Duchamp's readymades (second half of the 1910's), let's consider again the Marcel Duchamp of that time. Here is a man

- who worked on the *Large Glass* till 1923,
- who published under his name the reproduction of his *Chocolate Grinder* in his review *The Blind Man*
- who was present through his works in 35 different shows (with no readymades featured except once) from his arrival in New York in 1915 till 1935,
- who was so well considered in the US art world that he could make the most advanced galleries or institutions accept anything (if assumed by his artist's authority).

There is no doubt that this man obviously didn't want to exhibit his readymades at that time.

My question is : Why?

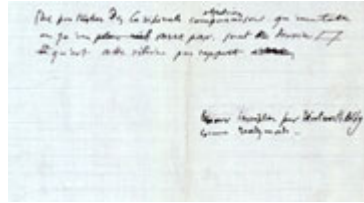

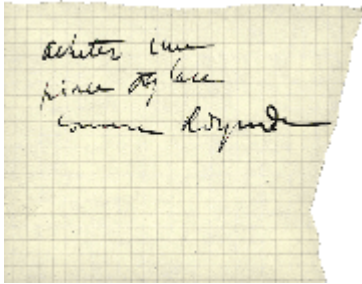

#### *chapter 4. The Notes*

Now let's see some Notes.

Only two notes name directly a precise object to be good for readymades: a pair of ice-tongs and the Woolworth Building.

## boîte verte 4.5

ARS, N.Y./ADAGP, Paris.

*Tirelire. (ou conserves)*

—

*Faire un ready-made avec une boîte enfermant quelque chose  
irreconnaissable*

*au son et Souder la boîte fait déjà dans le semi Ready-made  
[schéma]*

*en plaques de cuivre et pelote de corde.*

Piggy Bank. (or canned goods)

—

Make a ready-made with a box containing something  
unrecognizable

by its sound and solder the box already done in the semi  
ready-made

of copper plates and a ball of twine.

MD lets you know only the sound of the object. And, in order  
to be more complicated than the well-known *With Hidden Noise*  
[à bruit secret], he insists on the fact that this noise must  
be unrecognizable.

The imagination of Marcel Duchamp is very fertile to invent  
difficulties, to install a subtle labyrinth between him (or  
you) and the ordinary object itself.

*Préciser les "Readymades".*

—  
en projetant pour un moment proche à venir (tel jour, telle date telle minute), "d'inscrire un readymade". — Le readymade pourra ensuite être cherché (avec tous délais). —

L'important alors est donc ~~cette~~ cet horlogisme, cet instantané, comme un discours prononcé à l'occasion de n'importe quoi mais à telle heure. C'est une sorte de rendez-vous.

*Inscrire naturellement cette date, heure, minute sur le readymade, comme renseignements.*

—  
*aussi le côté exemplaire du readymade.*

### **translation**

Specifications for "Readymades".

—  
By planning for a moment to come (on such a day, such a date

such

a minute), “to inscribe a readymade” – The readymade can later be

looked for (with all kinds of delays). –

The important thing then is just this matter of timing, this snapshot

effect, like a speech delivered on no matter what occasion but at

such and such an hour. It is a kind of rendez-vous. Naturally inscribe

that date, hour, minute on the readymade as information.

–

Also the serial characteristic of the readymade.

In the latter note, he only sets for himself the date (exact time) of the inscription of the object. Because the choice can be anything, it is the easiest thing to do, but also the most difficult thing to do on a metaphysical level: if you want this choice to remain “indifferent,” without taste and without particular meaning.<sup>(1)</sup> You know the story of the Buridan ass who hesitates between a pot of oats and a pot of water, and finally dies of hunger and thirst. To avoid this tragic “embarras du choix” (difficulty of choosing), Marcel Duchamp invents a situation of emergency according to which, at that precise date, he will have to “inscribe” the first thing which would come to the top of his mind and within hand reach.

Here again, the creation, the talent, the imagination... of Marcel Duchamp is definitely not in the choice of the object (we don't even know which it is), but in the fancy screenplay of the process of this choice.

*Chercher un Readymade qui pèse un poids choisi à l'avance  
Déterminer d'abord un poids pour chaque année et forcer tous  
les  
Readymade d'une même année à être du même poids. ~~chaque année~~*

### **translation**

–Look for a Readymade which weighs a weight chosen in advance  
First decide on a weight for each year and force all  
Readymades of the same year to be the same weight.

In this note now, which is one of my favorites, MD gives the object only its weight. It is very difficult to imagine an object through its weight. Not because the weight is more imprecise than the visual aspect, but because the weight is humanly less identifying. In philosophy, we call it a less salient property of an object. And, in the second paragraph, MD still puts the objects conceptually farther from us, by introducing some fuzziness on the weight of the readymades, by giving only an annual mathematical average of them. MD loves this progressive complication, because it makes the objects always less graspable and always more conceptual.

You could tell me that MD nevertheless made three works *for real* in connection with each of these preceding three notes: *With Hidden Noise* which contains a secret object, the comb

which is dated “day, hour, and minute,” and the cage containing pieces of sugar which are made in marble and thus weigh incredibly more.

Yes, but these works are precisely not readymade objects. The conclusion is: either the readymade is a speculation (like those in the notes), or it is not a readymade.

If you are not convinced, let’s go back to the note concerning the sound.

boîte verte 4.3

Tirelire. (ou conserves)

—

Faire un readymade avec une boîte enfermant quelque chose irreconnaissable au son et Souder la boîte fait déjà dans le semi Readymade [schéma] en plaques de cuivre et pelote de corde.

### **translation**

Piggy Bank. (or canned goods)

—

Make a readymade with a box containing something unrecognizable by its sound and solder the box already done in the semi readymade of copper plates and a ball of twine.

You will notice that he calls a *readymade* the object which wouldn’t be recognizable by its sound. But he calls *semi readymade* the real object which could give a body to such a project. In other words: when you make known that you make a readymade, you make a semi-readymade – there is no other way. In both projects, the work is not a readymade, it is a handwritten note here, it is a “not readymade” sculpture there.

My first conclusion is that, in the case of Marcel Duchamp, the readymade is never a work of art; it is only the subject

matter of a work of art.

Of course all these notes are excellent, and here again you have to admit that Duchamp's creation consists, in every case, in the way he presents, through the sound, through the weight, through the programmed date, the far existence of the chosen object. That is why Duchamp's works of art definitely don't consist in the reality and not even in the "good" choice of the object. A readymade is "*une chose que l'on ne regarde même pas (...) qu'on regarde en tournant la tête.*" <sup>(2)</sup> It is as if the readymade was the hero of a fable, of a story, of a school hypothesis, of a speculation according to which "an ordinary object [could] become an artwork because of the mere choice of an artist."

Moreover, the anthropomorphism of the readymade in the vocabulary of Marcel Duchamp goes also towards a kind of fiction character making: he imagines readymades that could be *malade*, *malheureux*, *assisté* or *aidé* as if they were handicapped human beings.

Now, if you still claim that :

these notes written in the 1910's, or these semi-readymades exhibited here and there, or these naked objects photographed in his 1917 studio

prove the existence of "readymades" as works of art, then you make the same philosophical error as confusing the existence of Madame de Récamier with the existence of the painting portraying Madame de Récamier.

*Confirmations of the preceding question (chapter 3)*

This principle according to which "a readymade is not a work of art for Duchamp, but the subject matter of some of his works" is the mere reason why the objects were not exhibited at this time.

Moreover, it gives also a very satisfying explanation that almost all of them have been lost or destroyed :

- the bicycle wheel: [Roue de bicyclette]/lost
- the bottle rack: [a sentence was inscribed]/lost
- the shovel: *In advance of the broken arm*/lost
- the chimney cowl: *Pulled at four Pins*/lost
- the comb: [peigne]/Arensberg collection, Philadelphia museum
- the restaurant fresco: [fresque murale]/destroyed
- the typewriter cover: [...pliant ...de voyage]/lost
- the hat-rack: *Readymade* [Porte-chapeau]/lost
- the coat-rack: *Trap* [Trébuchet]/lost
- the urinal: *Fountain by Richard Mutt*/lost

It is relevant to notice that nine out of the ten original not-assisted readymades don't exist anymore, if you take into consideration that almost all of the other readymades have been carefully preserved (except for *pliant de voyage*), as well as his other more "regular" artworks (chocolate grinder paintings, small glasses, drafts for *the Bride*, etc).

### *Intermediary question*

If a readymade is an object of speculation, then, why such speculations? What place do they take in Marcel Duchamp's life, thought and work? To understand this, you have to read again the posthumous notes concerning the "infrathin." The notes on infrathin, which appear probably in the late thirties, prolong Marcel's speculations on the readymades.

### *chapter 5. The infrathin*

What means infrathin? Marcel says, "*On ne peut guère en donner que des exemples. C'est quelque chose qui échappe encore à nos définitions scientifiques.*" <sup>(3)</sup> It is now time to try to give a definition, even if this proposed definition is partial, and would merit a much longer development.

“Infrathin” generally characterizes a thickness, a separation, a difference, an interval between two things.

At first step, “infrathin” means “very, very, very thin.” It could be “ $1/10^6$  mm = 100  $\mu$  = *minceur des papiers*” as MD says in note MAT 11. But at this level, the concept means “infinitesimal,” it is not new nor interesting.

At a second step, “infrathin” characterizes any difference that you easily imagine but doesn’t exist, like the thickness of a shadow: the shadow has no thickness, not even at an Angstroem’s precision.

At a third step, the most beautiful one, “infrathin” qualifies a distance or a difference you cannot perceive, but that you can only imagine. The best example to introduce you to this notion is this note:

*note posthume, MAT 12*

*(~~maximum~~ distance maximum 3 à 4 mètres. – Tir de foire)*

**translation**

Infra thin separation between the detonation noise of a gun (very close) and the apparition of the bullet hole in the target.

(maximum distance 3 to 4 meters. – Shooting gallery at a fair)

You know that there is a certain duration between the *detonation* noise of the shot and the *apparition* of the hole in the target, but this duration is not perceptible. Marcel Duchamp is certainly not interested in finding the instruments with which you could physically perceive this separation through some new technology. What interests him is making you understand that it is just enough to imagine it.

The more invisible this difference is, the greater is the infrathin dimension of it:

### **translation**

The difference (dimensional) between 2 mass produced objects [from the same mold] is an infra thin when the maximum (?) precision is obtained.

*note posthume, MAT 35 (Figure 9)*

*Séparation infra-mince.*

*2 formes embouties dans le même moule (?) diffèrent l'une de l'autre entre elles d'une valeur séparative infra mince. Tous les "identiques" aussi identiques qu'ils soient, (et plus ils sont identiques) se rapprochent de cette différence de séparative infra mince.*

### **translation**

Infra-thin separation.

2 forms cast in the same mold (?) differ from each other by an infra thin separative amount.

All "identicals" as identical as they may be, (and the more identical they are) move toward this infra thin separative

difference.

With these two last notes, we are now very close to the readymades. In an interview in 1960, MD insisted "*C'est un objet tout fait, (...) généralement un objet de métal plus qu'un tableau.*" <sup>(4)</sup>

To Serge Stauffer in 1961, he gives precision about "'the serial characteristic...' càd. le coté 'mass production'" of the readymade. And indeed only industrial forms, especially metallic, once taken out of the same mold, look so much alike that their differences are greatly infrathin. Here comes the real reason why Marcel Duchamp's readymades were chosen amid industrial forms. Not at all because they are beautiful, as Louise Norton hints in Marcel's review *The Blind Man*, in 1917: their beauty doesn't need Marcel Duchamp. But because there is a very Duchampian question about them, which is: is there any difference between "2 mass-produced objects taken out of the same mould?" Is there a difference between two copies of the fifty-pronged bottle rack?

And it is true that the very very old philosophical questions about identity versus similarity, or about the existence of concepts versus the true singularity of individuals, must have been completely removed by the Industrial Age. Examples are very important in philosophy and the examples that the greatest philosophers – Duns Scotus, Plato, Occam, Hobbes, whoever – had in mind to discuss these matters could be faces, tables, pebbles or flowers. But all these objects, so similar could they be, remain very different to the naked eye. And the "argumency" was easy for Hobbes, for example, to demonstrate the irreducible singularity of single things by pointing out the difference between "even" 2 flowers of the same age and species. Confronted with mass-produced objects, such as packs of cigarettes or bottle racks, our notion of identity or our humanist notion of singularity is much more difficult and interesting to maintain.

The following note confirms that MD had this in mind, even in a naive way:

what Relations with the identity principle?

In front of two identical bottle racks, you know that they are

not the same because they are two, but you also know that you could be rapidly mistaken if you don't spot them together. You stick to coordinates in time and space to identify them, but you know how much these references are moving and unserviceable.

click to enlarge

C'est au nombre de trente-cinq environ que Marcel Duchamp fixe ses interventions dans le domaine plastique et encore y comprend-il une série de démarches plus ou moins spontanées qu'une critique inoffensivement avouée se référerait à homologuer : je pense, par exemple, à l'acte de signer une grande toile décorative, quelconque, dans un restaurant et, d'une manière générale, à ce qui constitue le plus clair (qui pourrait bien être le tout) de son activité depuis vingt ans : les diverses spéculations auxquelles l'a entraîné la considération de ces ready made (objets manufacturés posés à la dignité d'objets d'art par le choix de l'artiste) à travers lesquels, de bois ou bois, au mépris de tout autre secours, il s'en très explicitement exprimé. Mais quel peut être de quoi pour ceux qui savent se charger une signature dont il a été fait un usage aussi utile et parcimonieux ? Une lumière intense, fascinante, se répand grâce à elle, non plus sur l'objet étroit qu'en général elle situe, mais sur toute une opération de la vie mentale. Cette opération, des plus particulières, n'est susceptible de prendre tout son sens, se se montre parfaitement saisissable qu'une fois restituée à une série d'autres opérations, de caractère causal, dont aucune ne suppose d'être ignorée. C'est assez dire que l'intelligence que l'on peut avoir de l'œuvre de Duchamp et le fait de percevoir ses très légers prolongements ne peuvent être fonction que d'une connaissance historique approfondie du déroulement de cette œuvre même. Vu l'allure prodigieusement rapide de ce déroulement, le nombre très limité des gens publics de Duchamp commanderait de les évaluer sans rien omettre. Force m'est pourtant de m'en

Figure 11

of p.46© 2000 Succession Marcel  
Duchamp, ARS, N.Y./ADAGP, Paris.

On the next day, a third bottle rack is presented to you, and you have an absolute doubt about its identity. Is it a third one? Or one of the first two?

Now, is there a difference between a bottle rack and the very same bottle rack chosen by MD? No. There is no difference. Yes, there is an infrathin difference, which is invisible: it is his artistic intention. The difference lies in the brain fact of considering this bottle rack as an object of the Bazar de l'hôtel de ville and that one as a true artwork.

But MD never made such statements, only Richard Mutt did. Probably MD would have found such a statement rather pompous and ridiculous; it is a fact that he always said the opposite ("c'est une œuvre d'art qui n'en est pas une"; "c'était simplement une distraction"; "c'est un objet qui n'est même pas une œuvre d'art"). He never even wrote that readymades

“elevate an ordinary object to the dignity of a work by the mere choice of the artist.” It doesn’t sound like MD to talk about dignity of an artwork. Thanks to André Gervais, we now know this definition has been written by André Breton, because you get a very similar sentence in his 1935 famous article “Phare de la Mariée.” (Figure 11)

What MD was, on the contrary, highly interested in, was imagining such a situation, as a pure fiction, between two copies of an ordinary object in the privacy of his own studio or on the written speculations of his personal Notes.

## Chapter 6. Back to a 1923 note

Let us see now one of the last notes, probably dated 1923. [Incidentally, Claire Bustarret from the C.N.R.S. and I have been working on the analysis of the paper in order to determine a more accurate dating of the Notes of Marcel Duchamp.]

*Acheter ou prendre des  
tableaux connus ou pas connus et les signer du nom d'un*

*peintre connu  
ou pas connu.*

*La différence entre la "facture" et le nom inattendu pour les "experts", est l'œuvre authentique de Rose Sélavy et défie les Contrefaçons.*

### **translation**

Buy or take known or unknown paintings  
and sign them with the name of a known or unknown painter.

The difference between the "style" and the unexpected  
name for the "experts", is the authentic work of  
Rose Sélavy and defies forgeries.

Let's suppose that the painting is a painting by Delacroix and  
the name of the "painter known or unknown" is named Durand.

In this note, what work is Marcel Duchamp the author of?  
Certainly not the Delacroix painting. Nor the idea of  
exhibiting Durand as the author of a Delacroix. Much more  
subtly, his work is the difference between a painting which,  
in view of its "style," is a Delacroix and the same painting  
which, in view of its signature, is supposed to be a Durand.  
The difference between a Delacroix and a Durand is a Duchamp.  
Can you imagine a more infrathin difference? Or to be more  
complete, Duchamp is the author of Rose Sélavy who is the  
author of Durand who is the author of a Delacroix as a  
readymade.

With Marcel, it is always a question of heightening the  
degrees of a situation, by encircling with bigger circles the  
preceding circle of the situation. It is not a question of  
putting his name everywhere.

When I look at this last note, I think there is composition,  
manner, skill, style, expression, taste, beauty, but also

humour, game, profoundness and cleverness. It is fair enough to call it art. All Duchamp's art is here, in these two sentences, in the story they tell, in the way the words are put together, in the rhythm and in the ellipses, in the human coolness and a certain taste for games, and in the simplicity of syntax to say such complicated things. This note deals with the notion of readymade, but is definitely not a readymade. Because a readymade is not a work, it is a notion. If Marcel Duchamp's works have changed the concept of painting or literature or sculpture or fiction, they haven't changed at all the concept of art.

I could stop my paper here with that conclusion, hoping to convince the audience that Duchamp is not a magician nor a swindler who transforms, as with a magic wand, an ordinary object into a wonderful artwork. He is a thinker who expresses himself artistically.

### *chapter 7. Back to the first readymades*

Let us go back to the real "readymades" before they were lost. We have photographs of them hanging in Duchamp's studio, we have letters to Suzanne dealing with them. But there is nothing public. Who cares? – Could you tell me. Duchamp could have painted canvases at the same time and never have exhibited them, without us having doubts that they were Duchamp's works. But, precisely, a painting exists from the fact that it has been painted. Not a readymade. A readymade has to carry some contextual details which say: "this is a readymade." If not, it is only a shovel decorating the studio of an eccentric Frenchman. It is not enough that MD bought a bottle rack without using it to dry up bottles. It is not enough that MD believes and makes believe that this bottle rack is a work of art (because any collector considers any of the weird things he gets and installs in his house for plastic reasons, as pure and marvellous artworks – such as keyholders, coffee grinders or advertising ceramic plates). MD also has to believe and make believe that he (and not the designer) became

the author of these chosen objects. And the only way to do so is to exhibit clearly the chosen object in an art show amid other works of art and with the same status. Such an exhibition didn't take place. So if there is no work on the object (because it is only chosen), and if there is no exhibition of the chosen object, there is no readymade, and consequently there is no new artwork. It is like a knife without a blade, and to which the handle is missing.

Paris, February 1996
